# New Underground Communications Cable Installation Underway

Short-term car parking impacts may be experienced.  
Commercial and residential property access will be maintained.

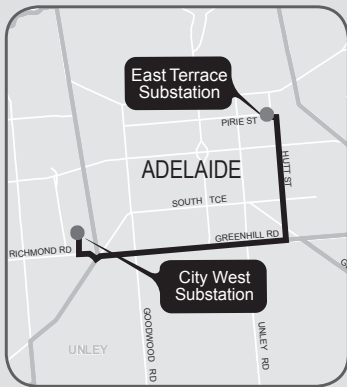

# Boosting Energy into our City

## Adelaide Central Reinforcement Program

ElectraNet is undertaking a major expansion of the electricity supply to the Adelaide CBD to ensure continued security and reliability of supply. This major infrastructure development includes the establishment of the new City West substation which will be connected to ElectraNet's communications network via new underground fibre optic cable. The underground fibre optic cable route will generally follow the road reserve of Greenhill Road and Hutt Street. ETSA Construction and Maintenance Services is our construction partner for the underground communications cable component of this work.

To install the fibre optic cable, directional boring techniques will be used and small jointing pits will be excavated and reinstated along the cable route near your property over the coming weeks. These pits have been located to minimise disruption to the community and to avoid damage to tree roots and other existing infrastructure.

Construction works in your area will commence in late June and progress quickly with completion of each pit expected within three days. We appreciate your patience and continuous support during this important stage towards securing the ongoing provision of reliable electricity to meet the growing demand of the city of Adelaide.
